SIMPro at a glance

Save Time

Simple and quick SIM estate management with...

- Near real time insights through data visualisation
- One click SIM control and rapid data drill down
- Real time digital service widgets

Optimise costs

Lower total cost of ownership by...

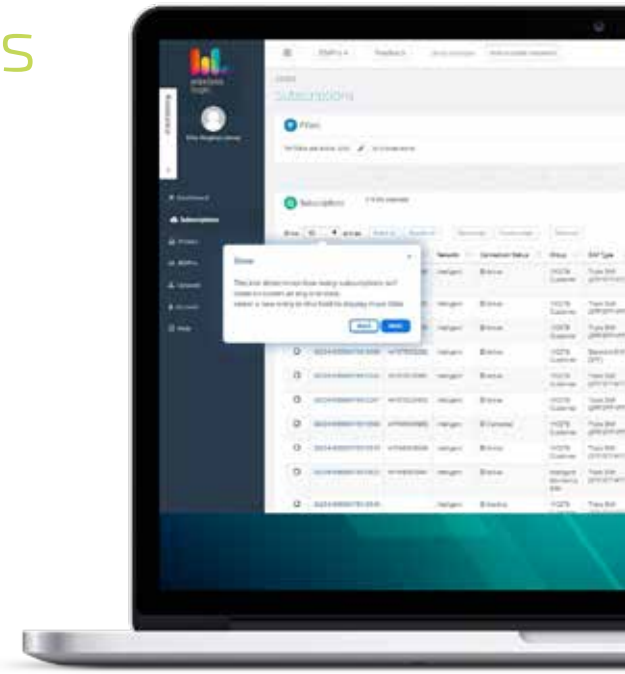
- Pre-empting issues through predictive usage
- Setting rules and alerts
- Scheduling advanced reporting

"Fast, clean and modern with nice features. User friendly and easy to navigate."

TruTac *A leading tachograph analysis software and compliance products company*

The features and benefits

SIMPro provides you with a flexible, easy to use SIM management platform across all of your connected assets.



Deploy and activate your assets quickly and easily

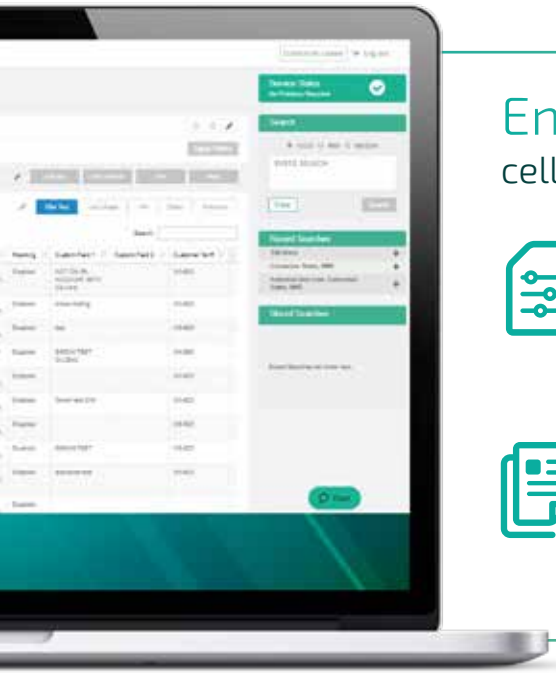
- View and control SIMs across multiple networks in one customisable window
- One click SIM controls – activate, suspend, get live status and more
- Scale your IoT deployment faster by ordering and activating through SIMPro

Optimise your costs and pre-empt issues through powerful insights

- Create a single view of your deployment with customisable dashboards
- Minimise the risk of bill shock by scheduling real-time reports and usage alerts
- Access real-time session data (network dependent)
- Track SIM location and data usage by country

Automate your connectivity

- Control your deployment with advanced rules and alerts
- Developer ready platform with REST and SOAP APIs
- Seamless integration into your existing workflows



Enhanced features to provide you with secure cellular IoT connectivity management in one window

Simple SIM Estate Management
Quick and simple SIM estate management.

Configurable Dashboards
Customisable dashboards in one easy to manage window.

Reporting
Advanced SIM estate reports and data exports.

Digital Assistant and Chat
Real time help with new digital service widgets.

Unified and flexible billing

- Single monthly bill across all networks used
- Flexible commercial models, including data aggregation and adjustable tariffs
- Flexible billing – split by business entity, business unit or country
- Bill-on capabilities for partners

Help and support for you in real time

- Digital Assistant with walk throughs and tips to help you to optimise your deployment
- Talk to our Service Desk via Web Chat
- Live mobile network status
- Quickly and easily raise and monitor support tickets

Integrate our APIs with your own systems and automate your connectivity management

Secure REST and SOAP APIs are built into the developer ready platform providing you with full SIM management functionality.

APIs enable you to seamlessly integrate the full SIMPro feature set with your own applications. This enables you to automate the entire device management process including the provision of customised reports and invoicing to end users.

Available InBound methods

- getBilling Accounts
- getTariffs
- getTariffDetails
- getSIMs
- getModifiedSIMs
- getSIMDetails
- getSIMUsage
- getSIMUsageHistory
- setSIMs
- getAvailable CustomerSolutions
- getCustomer SolutionDetail
- getLiveDetails
- getInvoices
- getInvoiceDetail
- ActivateSIM
- RefreshSIM
- manageSIMBars
- getRequestsStatus
- getCellLocation
- cancelSIM
- getCancellationQuote
- cancelSIMsbyQuotedID

Outbound Methods

- requestStatusUpdates
- swapSIMtoDespatchedSIMInfo
- UsageAlert

SMS APIs

- sendWakeUp
- sendSMS
- sendBinarySMS
- sendBulkSMS

Other APIs are available dependent on the solution that you choose.

Subscription Management

Manage & control all SIMs through simple subscription management screen.

- **One click SIM controls** – activate, suspend, get live status and more
- **Search** for subscriptions using ICCID, IMSI, MSISDN and IP addresses
- **Recent searches** are saved for re-use with option to store for future use
- **Predictive usage tools** compare previous months usage
- **'Last seen' usage** information available on subscription grid
- **Customise** filters and action buttons
- **Order and activate new SIMs** through the platform
- **View SIM Level session information** (voice, data usage and SMS)*.

*Availability and latency dependant on network

Customer Set-up

Wireless Logic works with you to configure the perfect SIMPro activation profiles to ensure SIMs are provisioned correctly for the intended application.

Typically this includes:

- The identity of the application
- Approved tariff including line rental, inclusive data, SMS, voice and any out of bundle costs
- Specified services for the application including but not limited to SMS, voice, CSD and roaming profile
- Intended APN for data transmission. Public, WL private or customer dedicated
- Connectivity type including specific VPN requirements.

Data Security

- We are ISO 27001 compliant so you can be confident that we manage and process your data in a secure way
- Role based permission giving different levels of access and control
- Two factor authentication.
